

## One System Collective

**What is the One System Collective?** The One System Collective brings a collective group of state agency, county office of education, district, and SELPA leaders together to coordinate, integrate, and provide equity in access to the Statewide System of Support initiatives, increasing Local Educational Agency (LEA) accessibility of resources and supports to improve student outcomes for all students, including students with disabilities.

**Why is the One System Collective Important?** Formerly known as the Students with Disabilities Collective, this group was reimagined and reformed in 2023 after a hiatus during the pandemic. The Collective is building upon the 2015 Special Education Task Force, *which promotes one system for all students*. As such, the collective seeks to promote the inclusion of students with disabilities in general education contexts.

**What is the One System Collective's Impact to Date?** In the first iteration of the group, known as the Students with Disabilities Collective, the **Basic Components tool** was launched alongside the California Department of Education and WestEd. The "BASICS" tool was designed to help LEAs identify, establish or strengthen, and continuously improve upon the basic components of a special education infrastructure.

In July 2023, in collaboration with the One System Collective, CCEE launched the **Levers for System Change tool** inspired by the Basic Levers tool, but intended to help LEAs improve outcomes for all students, including students with disabilities and general education students.

Launched in January 2024, **CCEE Statewide System of Support Resource Hub** is a centralized, searchable database of state-funded projects, grants, and initiatives, to assist COE's, districts, charter schools, and SELPAs, to connect to resources that can help LEAs improve student outcomes, employ best practices, and facilitate improvement plans. This is the first tool of its kind, and the collaborative efforts of this group have been integral to its development.
